Satellite/Orbital Mechanics

PROFESSIONAL PROFILE

Engineer with extensive experience in software development, data science and analytics, and customer-facing delivery roles. Driven, self-starter who thrives on solving complex problems, prototype development, and consistently exceeding customer expectations. Effective presenter and communicator who has founded multiple businesses, serving as contributor and leader of several successful teams.

PROFESSIONAL EXPERIENCE

Forward Deployed Solutions Engineer

C3 / Tysons Corner, VA / 2018 – Present

Work at the leading edge of C3 federal business to rapidly and accurately configure the C3 Platform and Application solutions, solving complex business problems involving significant scale and technical complexity in new domains and for new customers.

- Design, develop and maintain demos using C3 DSL and JavaScript, Python, HTML, CSS
- Work closely with customer Subject Matter Experts to establish applications requirements, success criteria, and write Product Specification
- Collaborate with C3 application engineers, product managers, and data scientists to deliver pre-production application “pilots” on the C3 platform

Technical Director, Public Sector

Ayasdi / Reston, VA / 2017 – 2018

Work on the Public Sector Sales team to help new and existing customers understand Topological Data Analysis and leverage the Ayasdi Artificial Intelligence Platform. Handle all aspects of the sales cycle and serve as the main customer-facing technical engineer on pilots.

- Develop customer specific demonstrations and data models within the platform using both structured and unstructured data
- As an expert on Ayasdi’s rapid prototype framework, work closely with product and engineering staff to develop UIs for bespoke applications
- Serve as data analyst, data scientist and software developer on customer POCs
 - Perform NLP feature generation and model development for both internal and customer products
 - Responsible for understanding, cleaning, processing and loading large volumes of data into the platform (data munging)
 - Develop models on complex and high dimensional data leveraging TDA and centrality measures
